ABCOIN

LIGHTPAPER

ABSTOCKS.COM - 2022

Contents

1. Introduction

ABGroupCoin is a cryptocurrency project with its own blockchain network structure. It was created to be a digital investment and store of value.

ABCOIN

2. Problem

It basically uses a hash function to prove these proofs of work done with a blockchain like other crypto-currencies and a proof-of-work based structure to be committed to this chain. Although this structure seems to be perfect, unfortunately, it has deficiencies that cause it to not be used in simple trade. These shortcomings; can summarize as "anonymous transaction structure", "incorrect shipments cannot be recovered" and "futures" and "installment payment support" that have become indispensable in our commercial life.

3. Solution

We added an address feature that works integrated with the [ABGC] user ID to ABGCoin. In this way, we have developed a crypto-currency devoid of the shortcomings we have identified. We define ABGCoin as a digital signature chain. During ABGC changeover, each owner sends the ABGC to the next wallet, signing the hash of the previous transaction with its own digital signature and the public key of the next wallet, adding this signature to the end of the ABGC digital signature chain.
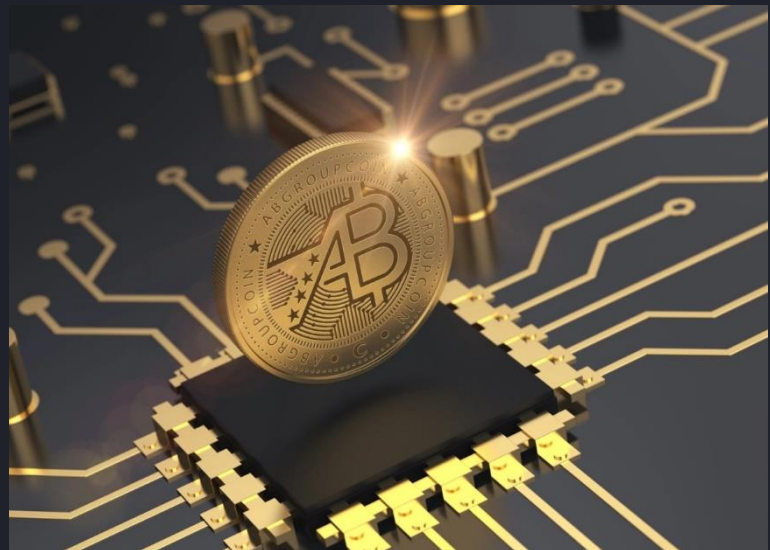

4. Examples

Thanks to its 30-second block generation speed, ABGCoin can quickly confirm very large and intense transaction numbers. As a result, quick money transfers can be made from wallet to wallet. This speed varies depending on the amount of KB sent and approval time. For example, it takes less than 2 minutes to send ABGC from one wallet to another over the network.

```
static const int64 nTargetTimespan = 10 * 60; // 5 minutes
static const int64 nTargetSpacing = 1 * 30; //  30 seconds
static const int64 nInterval = nTargetTimespan /nTargetSpacing.
```
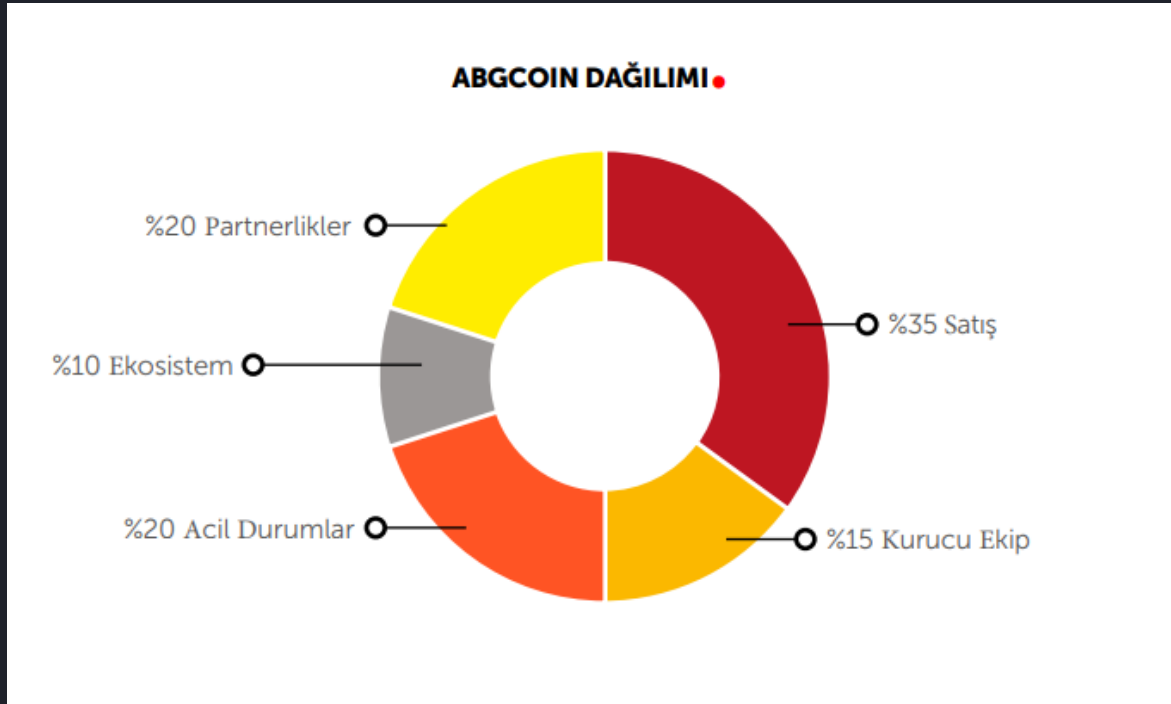

• It has its own blockchain network structure.

• It is 20 times faster than Bitcoin thanks to its 30-second block generation speed.

• Wallet addresses start with the letter "A".

• Proof of Work (PoW), that is, the proof of work was built with the consensus method.

• Block hashes are generated using the Scrypt Algorithm.

• It is a non-mining and fully produced cryptocurrency.

• Its total supply consists of 100,000,000 (One Hundred Million) units.

5. Distribution

ABGCOIN DAĞILIMI

%20 Partnerlikler

%10 Ekosistem

%20 Acil Durumlar

%35 Satış

%15 Kurucu Ekip

ABGroup Coin, which started trading with ABStocks on June 28, 2021, offered 4-5 percent of the crypto to the market with the pre-private sales.

• 35% Total Sales; Sales of 1.2%, not exceeding 100,000 per month and in daily/weekly shares

• Total 20% Solution Partnerships

• Total 20% Emergencies (Technical Structure and Development)

• Total 15% Founding Team • Total 10% Ecosystem (3rd party company agreements

5. Income

- Total 30% Management and Organization

- Total 30% Marketing and Advertising

- Total 20% Software Development

- Total 10% R&D Investment
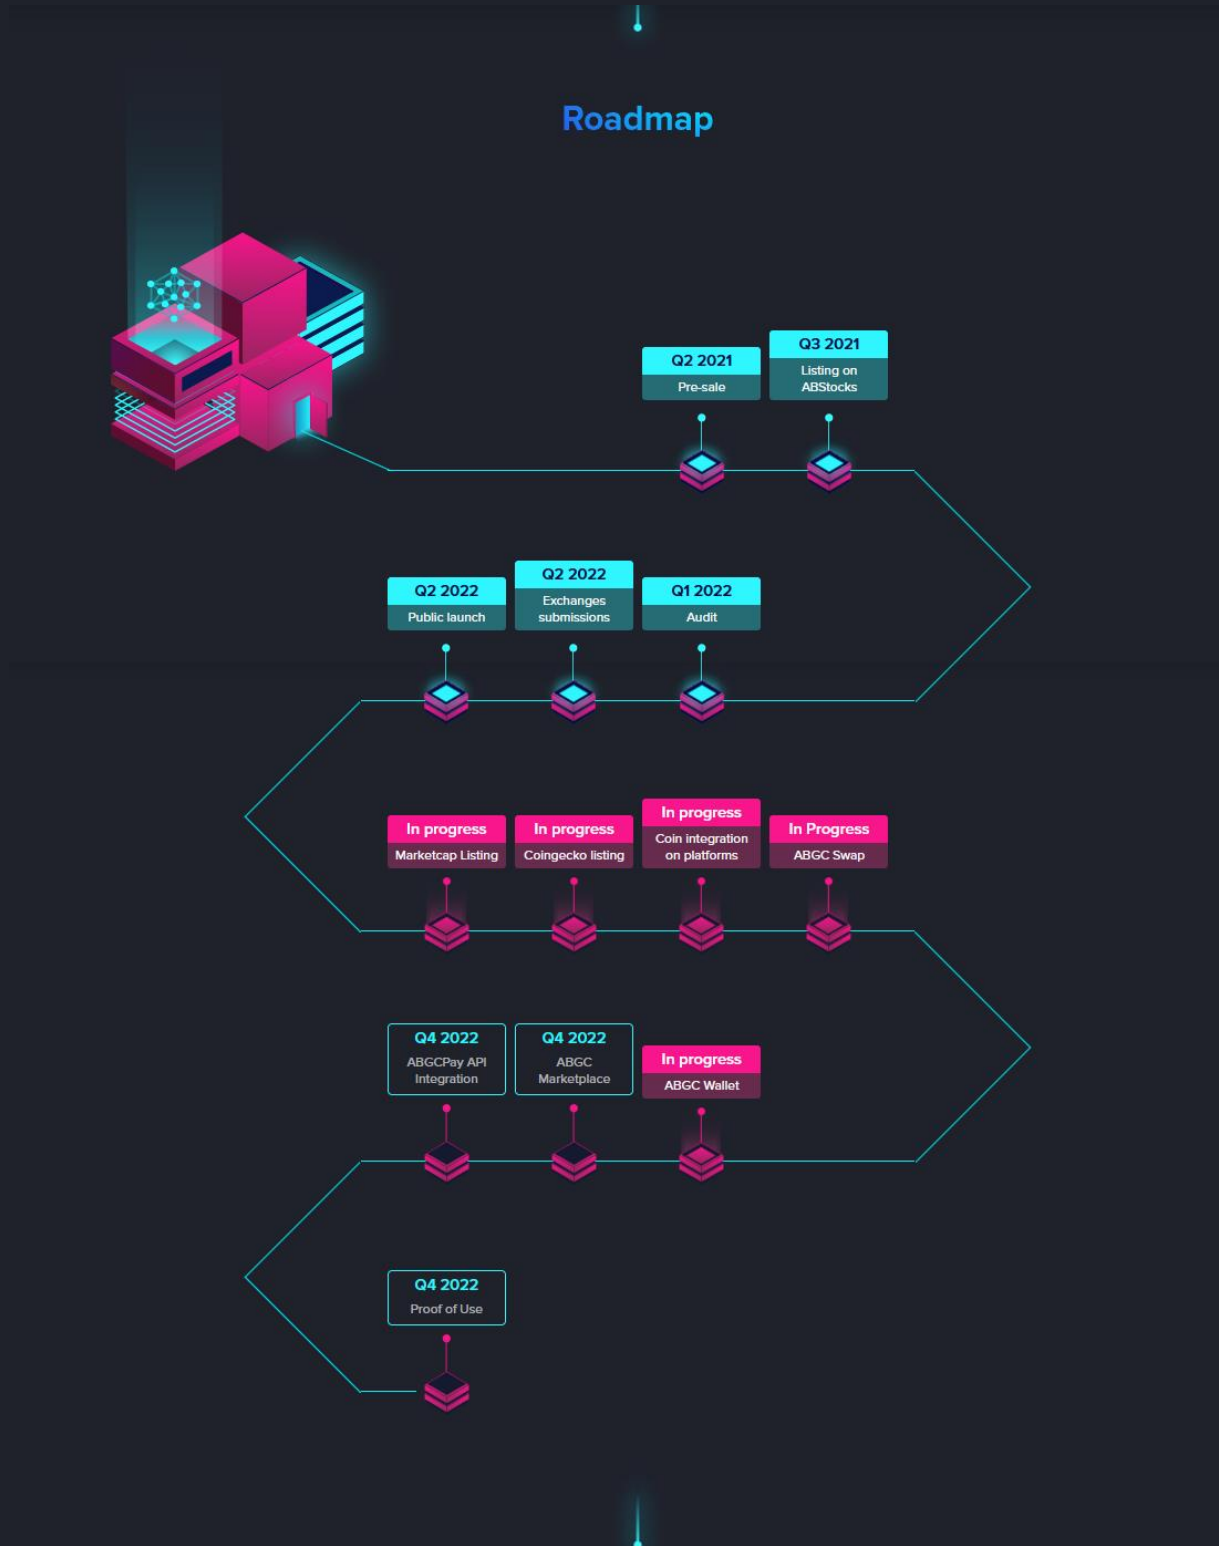

- Total 10% Rewards and Campaigns

6. Vision

AB Holding Founder Muhsin Bayrak announced that they will use ABGC Coin as a financing and payment tool in their investments in the construction and energy sectors.

It contributes to building the Crypto Finance model of the future and is driving the future of ABGC Coin globally..

7. Road Map

Roadmap

Q2 2021
Pre-sale

Q3 2021
Listing on ABStocks

Q2 2022
Public launch

Q2 2022
Exchanges submissions

Q1 2022
Audit

In progress
Marketcap Listing

In progress
Coingecko listing

In progress
Coin integration on platforms

In Progress
ABGC Swap

Q4 2022
ABGCPay API Integration

Q4 2022
ABGC Marketplace

In progress
ABGC Wallet

Q4 2022
Proof of Use
